

Venetian Blind System Silent Gliss 8300

Venetian Blind Systems

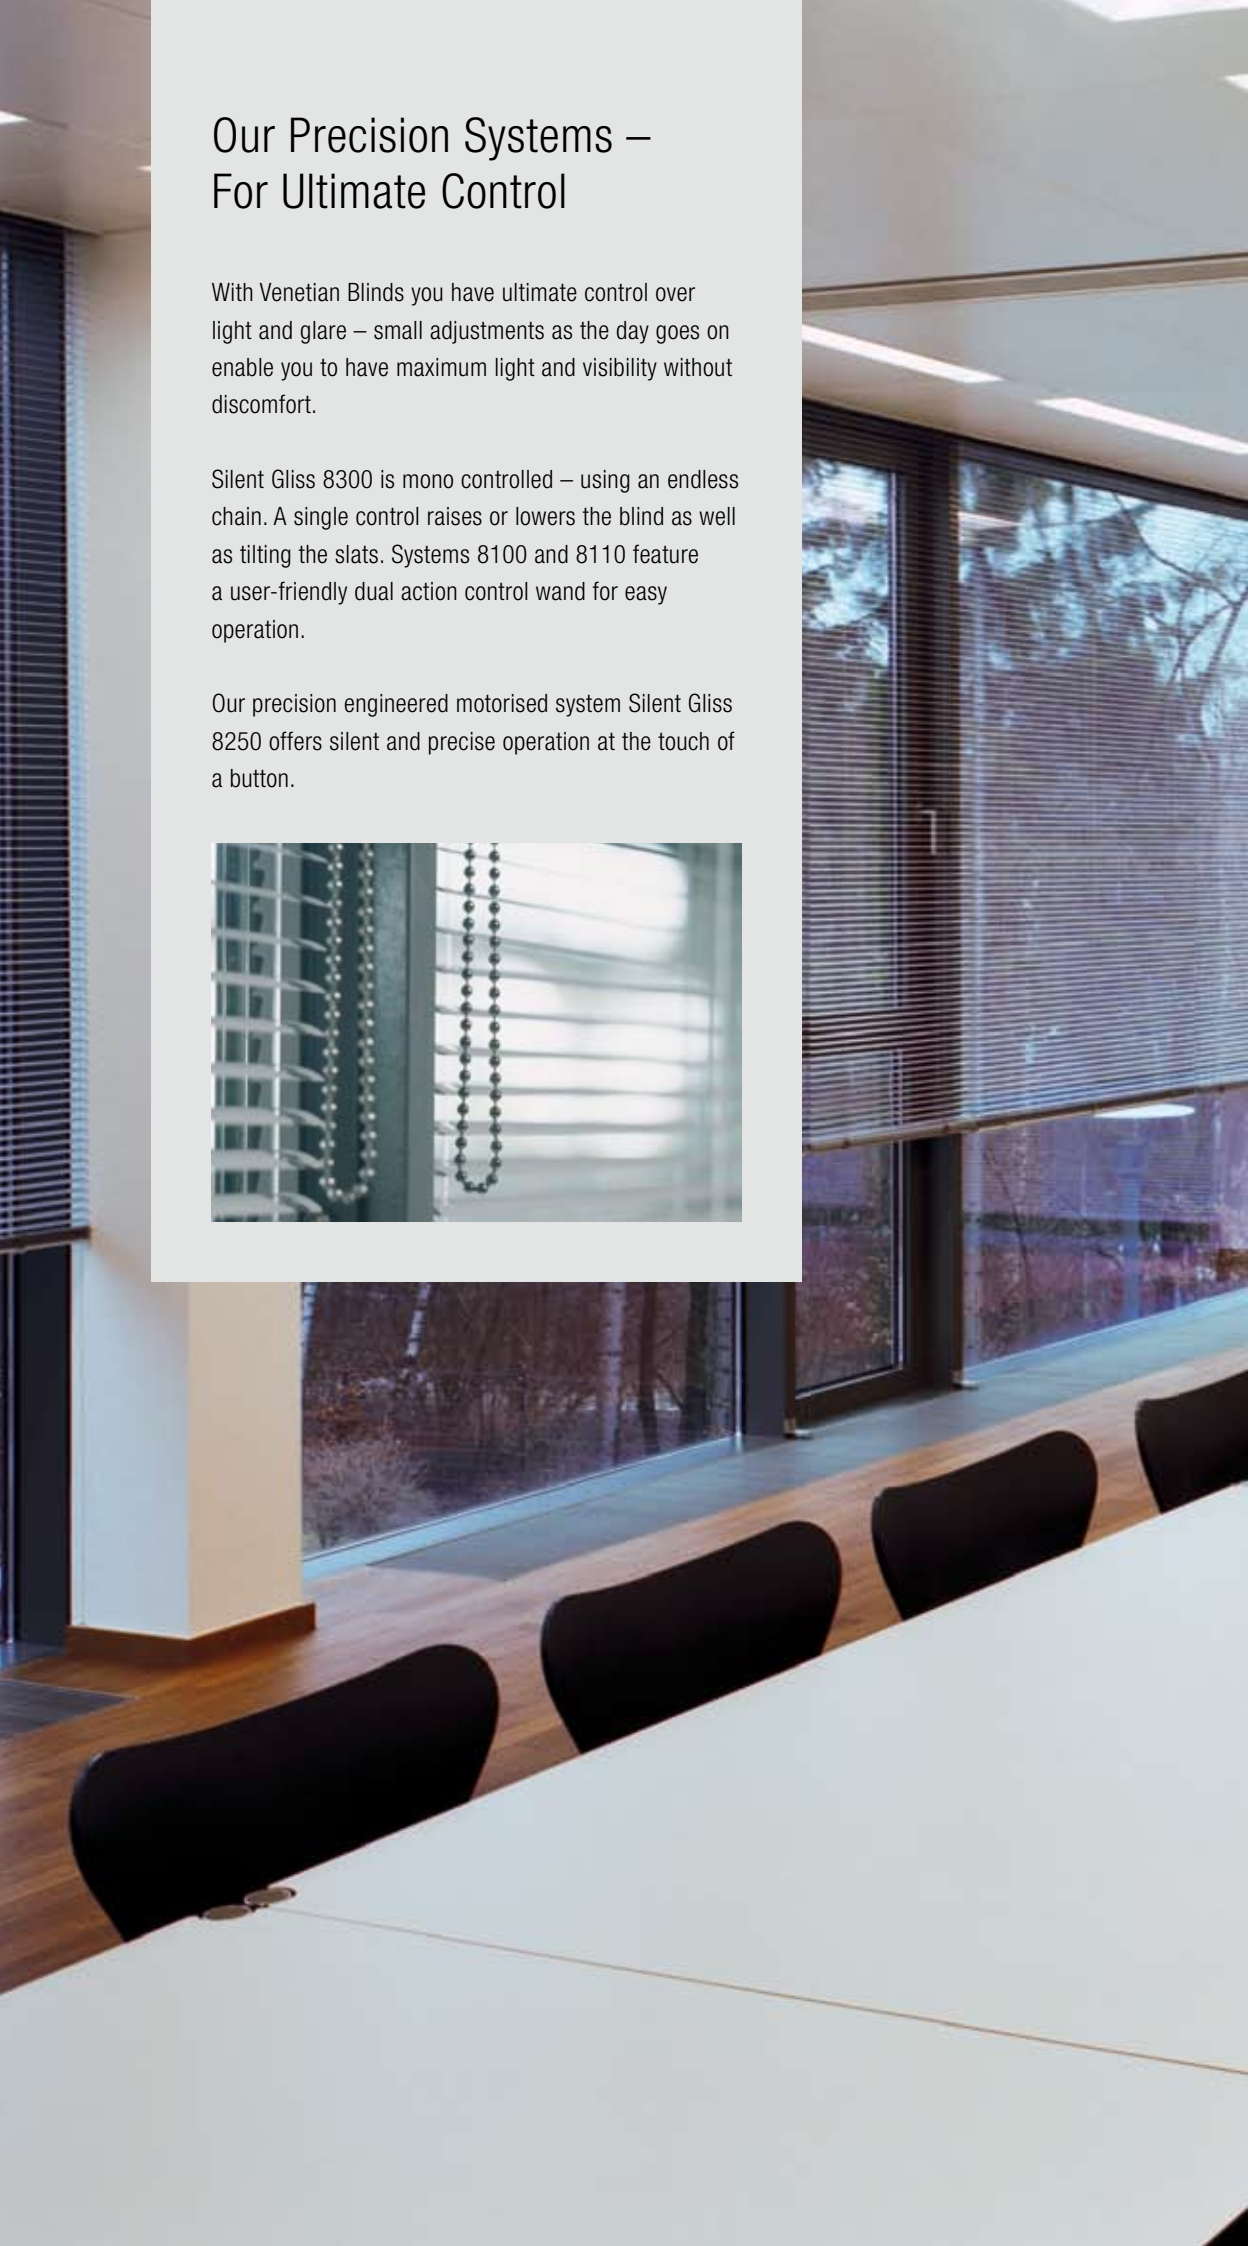

Our Precision Systems – For Ultimate Control

With Venetian Blinds you have ultimate control over light and glare – small adjustments as the day goes on enable you to have maximum light and visibility without discomfort.

Silent Gliss 8300 is mono controlled – using an endless chain. A single control raises or lowers the blind as well as tilting the slats. Systems 8100 and 8110 feature a user-friendly dual action control wand for easy operation.

Our precision engineered motorised system Silent Gliss 8250 offers silent and precise operation at the touch of a button.

Silent Gliss 8100

This attractive system fits into small window frames due to its narrow head rail and small 16mm slats.

The user-friendly dual action control wand combines tilting and fast lifting/lowering of the blind. The slats can be selected from our attractive colour range.

Silent Gliss 8110

Unique wand controlled system which is available with 16mm or 25mm slats. Through a new engineered click mechanism, the slats snap into a closed position to avoid a gradual reopening. The new control wand with an integrated brake enables precise and controlled lowering of the slats.

The “Privacy Feature” (PC), with its special hole punching method for the 25mm slats, ensures no direct light penetration when the slats are closed. This makes the system ideal for use in offices and complies with EC computer shading regulations.

Silent Gliss 8250

The silent and precise motor ensures a smooth operation at your fingertips.

In combination with our Radio Remote Control System, it offers you almost unlimited operating possibilities, giving you total control over your system.

Available with 16mm or 25mm slats.

Silent Gliss 8300

Mono controlled, chain operated Venetian blind system – one single metal chain controls both raising and lowering of the slats and tilting.

The side by side chain alignment offers superior and user-friendly operation of the system.

The system is offered with 16mm or 25mm slats.

Silent Gliss 8900

Mono controlled, cord operated Venetian blind system with 50mm slats. The single cord opens, closes, raises and lowers the slats.

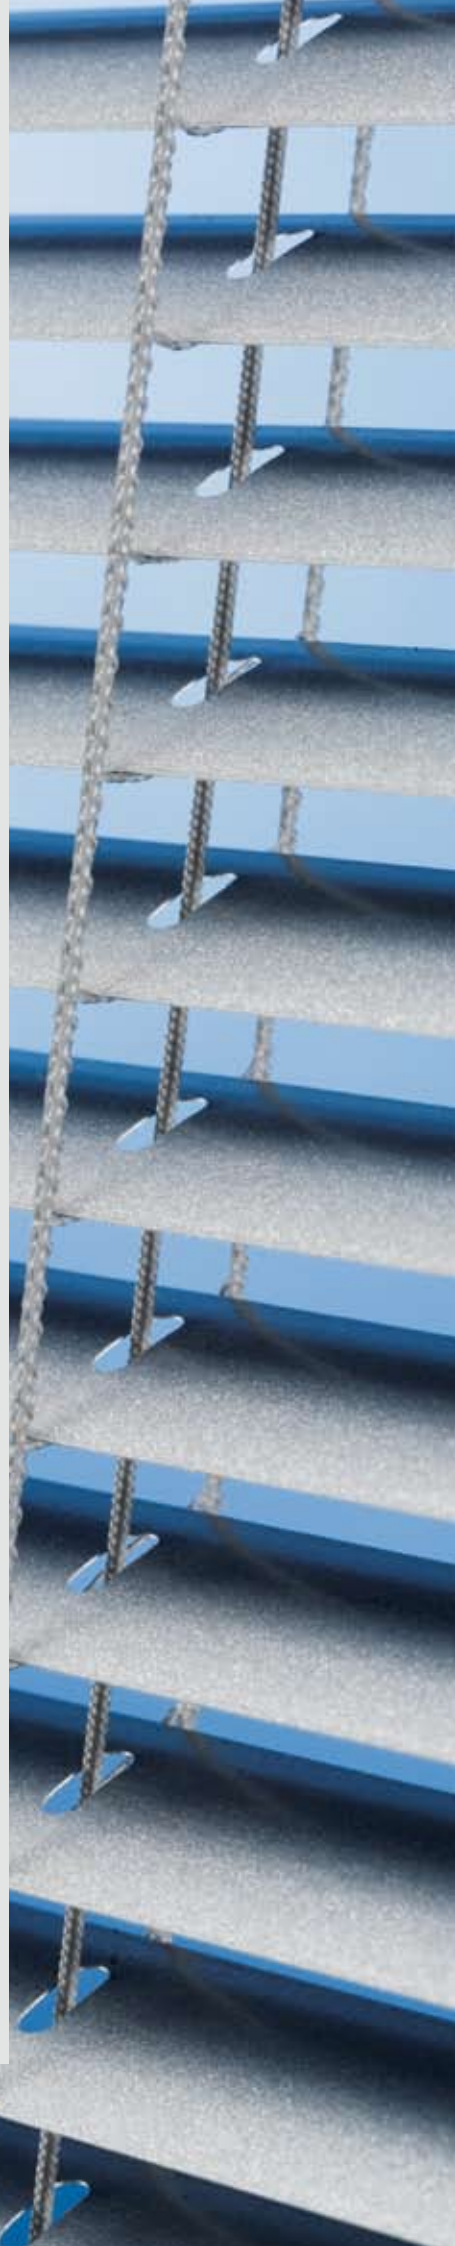

The larger 50mm slats, available in either wood or aluminium, give a contemporary appearance to a room. The headrail contains a blind slat to ensure a complete match throughout the system.

Personalise your System

Exciting perforated, sand-coated and mirror slats are just a few examples of our slat range – which contains 77 eye-catching colours – giving you almost endless possibilities to personalise your system.

Most of the colours are available with 16mm and 25mm slats. Additionally, some slats are thermo coated and reflect the light, which reduces heat entering the room. For the 50mm system there is a choice of over 30 wood slats, including textured and grain finishes, along with 5 aluminium slat colours.

Silent Gliss is the leading global supplier of motorised and manual curtain and blind systems in the high quality market. We offer our customers the very best in terms of quality, design, technology, service and individuality. A team of highly skilled and experienced professionals work on new developments as well as on the improvement of existing products. With committed customer support teams Silent Gliss provides an extensive range of services including technical advice, fitting services and maintenance worldwide.
